

Intersectionality – Three Key Principles

- Intersectionality is a theory that recognizes that people have many overlapping identities and may face multiple forms of discrimination at the same time.
- Intersectionality is not only about identity, it's also concerned with how institutions and social systems work together to create and reinforce inequities and disadvantages for certain groups of people.
- In order to fight oppression, we can't just isolate and highlight one form of oppression out of the many that exist. Instead, we need to remember that all forms of violence and oppression are linked and therefore our strategies to fight oppression must be inclusive and cannot treat one struggle for liberation as more important than any other.
